These VxHOO/VxHOO/VxHOO/VxHOO/VxHOO

capturing an image on a first support and at least one sensimetry control recorded on the same support so as to obtain initial digital codes for a set of pixels in the images and sensimetry control and the establishment from the digital codes of the sensimetry control of at least one initial sensimetry relationship for the first support the initial sensimetry relationship linking the digital codes to the support's light exposure values and establishment from at least one target sensimetry relationship corresponding to the target rendering of new digital codes for a plurality of images pixels the new digital codes being established so that the new digital codes and the initial digital codes of each pixel are linked to the same exposure value respectively by the target sensimetry relationship and the initial sensimetry relationship (About) - 0.76 s | SearchScan
